                     The present invention describes a protein which is fused with a compositional antibody against an antigen present on cell surface and which can transfer a gene by combining with the gene and containing a human type single-stranded monoclonal antibody and a peptide which is the combining site for the gene. Also described is a complex of a monoclonal antibody-fused protein which is a complex of monoclonal antibody-fused protein and a DNA, and a method for the preparation of a monoclonal antibody-fused protein against a receptor present on cell surface in which: (1) and mRNA extracted from a hybridoma cell having productivity of said monoclonal antibody against a receptor present on, cell surface is mouse type monoclonal antibody a single-stranded antibody gene of a human type monoclonal antibody is converted to prepare a single-stranded antibody gene of a human type monoclonal antibody is converted to prepare a single-stranded the minimal type monoclonal antibody to the single-stranded antibody gene of the minimal cold tail is added to the spingle-stranded antibody gene of the single-stranded antibody is converted to prepare a single-stranded but the single-stranded antibody gene of a human type monoclonal antibody servance a single-stranded antibody the prepare a single-stranded servance and servance as single-stranded antibody the prepare as single-stranded antibody the prepare as single-stranded antibody the prepare as single-stranded servances.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Also described is a method for introducing the above complex of monoclonal antibody-fused protein of a monoclonal antibody-fused protein against a receptor present on cell surface. The present sequence represents a protein sequence which is given in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Unidentified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A protein fused with a monoclonal antibody against an antigen present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          gene is expressed in a microbe to prepare a recombinant protein of the human type single-stranded immunoporter. Also described is a method for introducing the above complex of monoclonal antibody-fused protein through a cell surface receptor. The method is used for the preparation of a monoclonal antibody-fused protein against a receptor present on cel surface. The present sequence represents a protein sequence which is given in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                             paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepattis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these diseases.
                                                                                                                                                                                                                                                                                                                      AAY36754-Y37949 are encoded by open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma,
                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Genome sequence of Chlamydia trachomatis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Vaccine; eye disease; conventional trachoma; nonendemic trachoma; paratrachoma; inclusion conjunctivitis; genital disease; perihepatitis; nongonococcal uretritis; epidymitis; cervicitis; salpingitis; bartholinitis; pneumopathy; venereal lymphogranulomatosis.

Nucleic acids from Corynebacterium glutamicum encoding pathway proteins, useful for producing fine chemicals i microorganisms, including organic acids, nonproteinoger and purine and pyrimidine bases acids, nonproteinogenic metabolic amino acids

Claim 20; Page 1595-1596; 1737pp; English.

AAF71753 to AAF72330 encode the Corynebacterium glutamicum metabolic pathway (NP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, purine and pyrimidine bases, nucleosides, nucleotides, lipids, saturated and unsaturated fatty acids, diols, carbohydrates, aromatic polyketides and

Sequence 17, Application US/10096246

Publication No. US20030100060A1

GENERAL INPORMATION:
APPLICANT: The Minister of National Defence, Government of Canada
APPLICANT: Fulton, R E
APPLICANT: APPLICANT: Additional Expression, Sequencing, and Functional Enhancement of MC
TITLE OF INVENTION: Cloning, Expression, Sequencing, and Functional Enhancement of MC
TITLE OF INVENTION: ScrV Antibody Against Venzuelan Equine Encephalitis Virus (Vee)
FILE REFERENCE: NEL-0007
CURRENT APPLICATION NUMBER: US/10/096,246
CURRENT APPLICATION NUMBER: 2002-03-13
NUMBER OF SEQ ID NOS: 37
SOFTWARE: Patentin version 3.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 14, Application US/09875456A
Patent No. US20020045229A1
GENERAL INFORMATION:
APPLICANT: Qin, Ming
APPLICANT: Qin, Ming
APPLICANT: D'Andrea, Michael
TITLE OF INVENTION: DNAs encoding human betala sodium channel subunit
FILE REFERENCE: ORT-1221
CURRENT APPLICATION NUMBER: US/09/875,456A
CURRENT FILING DATE: 2001-09-10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             76.5%; Score 26; DB 10; Length 251; 71.4%; Pred. No. 3.7e+02;
